

Packaged Systems

When you want your Bently Nevada machinery protection or condition monitoring systems delivered fully engineered, completely configured, tested, pre-wired, and labeled, our packaged systems offerings are the answer.

- All up-front engineering and design, including component sizing, layout, ventilation, illumination, convenience outlets, lightning protection, etc.
- Comprehensive, easy-to-read documentation for all system wiring, interconnection, and mechanical details
- Customer-specific system configuration and tagging
- Factory Acceptance Testing/Staging
- Bently Nevada hardware can be combined in the package with other third-party control and automation components such as programmable controllers, turbine control systems, SCADA systems, etc.
- Standard and custom offerings to meet a variety of hazardous area, environmental, and aesthetic requirements
- Standard package designs can often be delivered in about the same time as an unpackaged monitoring system
- Can be supplied as part of a complete installation project, or as stand-alone when package will be site-installed by others
