

2008 Training Schedule

Available Online

In 2008, we will be conducting more than 100 training sessions globally that cover our Bently Nevada* product line, our System 1* software, our thermodynamic performance monitoring software, and reliability and maintenance program development. GE has more than 25 separate offerings in our portfolio of available courses on these topics, helping to ensure that a course addressing your specific needs will be available.

We invite you to visit us at...

www.ge-energy.com/training and click on "Optimization and Control Training" to learn more about these courses and decide which ones are right for you and your organization. When you visit the site, you'll find numerous enhancements we have recently introduced that make it easier to:

- Filter the calendar on the specific course title, location, and range of dates desired
- Register for the course(s) of your choice online
- Obtain maps and useful visitor information for our training center locations in the United States
- Quickly see the course duration, the course ID number, and the price

Our training classes are consistently given high marks by customers for the small ratio of students to instructors, the deep experience of the instructors, the quality of the curriculum, and the amount of hands-on time allocated so that students actually learn by doing, not just listening.
